Solving Problems in Genetics Richard Kowles,2013-12-01 Helping undergraduates in the analysis of genetic problems, this work emphasizes solutions, not just answers. The strategy is to provide the student with the essential steps and the reasoning involved in conducting the analysis, and throughout the book, an attempt is made to present a balanced account of genetics. Topics, therefore, center about Mendelian, cytogenetic, molecular, quantitative, and population genetics, with a few more specialized areas. Whenever possible, the student is provided with the appropriate basic statistics necessary to make some the analyses. The book also builds on itself; that is, analytical methods learned in early parts of the book are subsequently revisited and used for later analyses. A deliberate attempt is made to make complex concepts simple, and sometimes to point out that apparently simple concepts are sometimes less so on further investigation. Any student taking a genetics course will find this an invaluable aid to achieving a good understanding of genetic principles and practice.

**Learning Theories** David C. Leonard,2002-12-30 Swift changes in educational technology are transforming the landscape of our society and how we transfer knowledge in a digital world. Teachers, administrators, and education students need to stay abreast of these developments. Yet while the new educational software, technologies, and networks may be available, the learning theories and methods required to take complete advantage of the tools are often neglected. Learning theories are a crucial element of education studies for anyone involved with students from pre-school to higher education and business training. This book is a substantive dictionary of over 500 terms relating to learning theories and environments. Definitions range from approximately 100 to 700 words, and each term is identified by the primary type of learning theory to which it applies: cognitivism, constructivism, behaviorism, humanism, or organizational learning. An annotated bibliography provides further resources to the most important writings about learning theories.

Reasoning in Biological Discoveries Lindley Darden,2006-06-26 Reasoning in Biological Discoveries brings together a series of essays, which focus on one of the most heavily debated topics of scientific discovery. Collected together and richly illustrated, Darden's essays represent a groundbreaking foray into one of the major problems facing scientists and philosophers of science. Divided into three sections, the essays focus on broad themes, notably historical and philosophical issues at play in discussions of biological mechanism; and the problem of developing and refining reasoning strategies, including interfield relations and anomaly resolution. Darden summarizes the philosophy of discovery and elaborates on the role that mechanisms play in biological discovery. Throughout the book, she uses historical case studies to extract advisory reasoning strategies for discovery. Examples in genetics, molecular biology, biochemistry, immunology, neuroscience and evolutionary biology reveal the process of discovery in action.

**Evolution Algebras and Their Applications** Jianjun Paul Tian,2008 Behind genetics and Markov chains, there is an intrinsic algebraic structure. It is defined as a type of new algebra: as evolution algebra. This concept lies between algebras and dynamical systems. Algebraically, evolution algebras are non-associative Banach algebras; dynamically, they represent discrete dynamical systems. Evolution algebras have many connections with other mathematical fields including graph theory, group theory, stochastic processes, dynamical systems, knot theory, 3-manifolds, and the study of the Ihara-Selberg zeta function. In this volume the foundation of evolution algebra theory and applications in non-Mendelian genetics and Markov chains is developed, with pointers to some further research topics.
