*Gasoline-engine Management* 2004 a brief retrospective of the early years of the history of the automobile is followed by a description of the principles behind the operation management and control of a gasoline spark ignition engine. Descriptions of the cylinder charge control fuel injection ignition and catalytic emission control systems provide a comprehensive overview of the control mechanisms which are essential to the operation of a modern gasoline engine. The texts dealing with the Motronic engine management system illustrate how this is put into practice. Particular emphasis is placed here on the diagnostic functions which on account of the ever more stringent requirements of emission control legislations make up an increasing proportion of the Motronic system.

**Engine Management Systems Manual** 2005 a recent research report released by the U.S. Department of Transportation's National Highway Traffic Safety Administration (NHTSA) has stated that almost 175,000 pedestrians died on U.S. roadways between 1975 and 2001. It was also noted in the report that 12% of all deaths related to motor vehicle crashes in the country are pedestrian fatalities. Most of the safety technology to date in vehicles has been applied to protect the occupants in the vehicle. What can vehicle manufacturers do to reduce pedestrian fatalities? With research being focused on two major fronts: methods to sense the presence of pedestrians and warn drivers of their location and ways to design vehicles that can help not only adults of various age groups to survive an impact between them and a vehicle but also children that are smaller than most adults. The technical papers in this SAE Progress in Technology Series book explore ways the automobile can be designed to help reduce fatalities and injuries when a pedestrian and vehicle meet during an impact.

It is riven with internal contradictions that inhibit reform and faces a stark choice between years of strife or radical change. This book is a wake-up call for those who work in the automotive business. It highlights the challenges and opportunities that exist for managers, legislators, financial institutions, and potential industry entrants. Most of all, it gives us all cause to reflect on the value of our mobility today and tomorrow.
