Reactor Dosimetry State Of The Art 2008 - Proceedings Of The 13th International Symposium

2009-08-19

this book gives the state of the art in the field of reactor dosimetry as applied in nuclear power plants and research reactors surveillance programs are presented for nuclear power plants in europe including russia and ukraine usa argentina and korea new cross section measurements from most of the european american and japanese research reactors are reported the latest developments in computer code development for radiation transport and shielding calculations and radiation measurement techniques are also highlighted

the third edition of this hands on textbook pursues the focus on the principles of wireless sensor networks wsns their applications their protocols and standards and their analysis and test tools a meticulous care has been accorded to the definitions and terminology to make wsns felt and seen the adopted technologies as well as their manufacturers are presented in detail in introductory computer networking books chapters sequencing follows the bottom up or top down architecture of the seven layers protocol this book is some more steps after both horizontally and vertically the view and understanding are getting clearer chapters ordering is based on topics significance to the elaboration of wireless sensor networks wsns concepts and issues this book is intended for a wide audience it is meant to be help and motivate for both the senior undergraduates postgraduates researchers and practitioners concepts and wsns related applications are laid out research and practical issues are backed by appropriate literature and new trends are put under focus for senior undergraduate students it familiarizes with

conceptual foundations applications and practical projects implementations for graduate students and researchers energy efficient routing protocols transport layer protocols and cross layering protocols approach are presented testbeds and simulators provide a must follow emphasis on the analysis methods and tools for wsns for practitioners besides applications and deployment the manufacturers and components of wsns at several platforms and testbeds are fully explored

what makes polaroid photography stand out since its invention by edwin land in 1947 how has it crept into our common culture in the ways we witness today writing in the context of the two bankruptcies of polaroid corporation and the decline and obsolescence of its film peter buse argues that polaroid photography is distinguished by its process the fact that as the new york times put it the camera does the rest encouraged distinctive practices by the camera s users including its most famous use as a party camera polaroid was often dismissed as a toy but this book

takes its status as a toy seriously considering the way it opened up photographic play while simultaneously lowering its own cultural value drawing on unprecedented access to the archives of the polaroid corporation buse paints polaroid as an intimate form where the photographer photograph and photographed are in close proximity in time and space this has profound implications for the photographic practices polaroid cameras permit and encourage such as the sexual polaroid evidence of which the author pulls from literature film and pop culture or polaroid as a form of play a fun technology an ice breaker that can make things happen buse also tells the story of polaroid s response as a company to developments in digital imaging and its ultimately doomed hard copy wager in the face of them pushing further he explores the continuities and discontinuities between polaroid and digital snapshot practices reflecting on what polaroid can tell us about digital photography today

risk based ship design is a new scientific and engineering field of growing interest to researchers engineers and professionals from various disciplines related to ship design construction operation and regulation the main motivation to use risk based approaches is twofold implement a novel ship design which is considered safe but for some formal regulatory reason cannot be approved today and or rationally optimize an existing design with respect to safety without compromising on efficiency and performance it is a clear direction that all future technological and regulatory international maritime organisation developments regarding ship design and operation will go through risk based procedures which are known and well established in other industries e g nuclear aviation the present book derives from the knowledge gained in the course of the project safedor design operation and regulation for safety an integrated project under the 6th framework programme of the european commission ip 516278 the book aims to provide an understanding of the fundamentals and details of the integration of risk based approaches into the ship design process the book facilitates the transfer of knowledge from recent research work to the wider maritime community and advances scientific approaches dealing with risk based design and ship safety

the conceptual evolution of dsm 5 highlights recent advances in our understanding of cross cutting factors relevant to psychiatric diagnosis and nosology these include developmental age related aspects of psychiatric diagnosis and symptom presentation underlying neuro circuitry and genetic similarities that may clarify diagnostic boundaries and inform a more etiologically based taxonomy of disorder categories and gender culture specific influences in the prevalence of and service use for psychiatric disorders this text also considers the role of disability in the diagnosis of mental disorders and the potential utility of integrating a dimensional approach to psychiatric diagnosis a powerful reference tool for anyone practicing or studying psychiatry social work psychology or nursing the conceptual evolution of dsm 5 details the proceedings from the 2009 american psychopathological association s annual meeting in its chapters readers will find a thorough review of the empirical evidence regarding the utility of cross cutting factors in nosology as well as specific suggestions for how they may be fully integrated into the forthcoming fifth edition of diagnostic and statistical manual of mental disorders

the field of proteomics has advanced considerably over the past two decades the ability to delve deeper into an organism s proteome identify an array of post translational modifications and profile differentially abundant proteins has greatly expanded the utilization of proteomics improvements to instrumentation in conjunction with the development of these reproducible workflows have driven the adoption and application of this technology by a wider research community however the full potential of proteomics is far from being fully exploited in plant biology and its translational application needs to be further developed in 2011 a group of plant proteomic researchers established the international plant proteomics organization inppo to advance the utilization of this technology in plants as well as to create a way for plant proteomics researchers to interact collaborate and exchange ideas the inppo conducted its inaugural world congress in mid 2014 at the university of hamburg germany plant proteomic researchers from around the world were in attendance and the event marked the maturation of this research community the research topic captures the opinions ideas and research discussed at the congress and encapsulates the approaches that were being applied in plant proteomics

the field of cognitive modeling has progressed beyond modeling cognition in the context of simple laboratory tasks and begun to attack the problem of modeling it in more complex realistic environments such as those studied by researchers in the field of human factors the problems that the cognitive modeling community is tackling focus on modeling certain problems of communication and control that arise when integrating with the external environment factors such as implicit and explicit knowledge emotion cognition and the cognitive system these problems must be solved in order to produce integrated cognitive models of moderately complex tasks architectures of cognition in these tasks focus on the control of a central system which includes control of the central processor itself initiation of functional processes such as visual search and memory retrieval and harvesting the results of these functional processes because the control of the central system is conceptually different from the internal control required by individual functional processes a complete architecture of cognition must incorporate two types of theories of control type 1 theories of the structure functionality and operation of the controller and type 2 theories of the internal control of functional processes including how and what they communicate to the controller this book presents the current state of the art for both types of theories as well as contrasts among current approaches to human performance models it will be an important resource for professional and student researchers in cognitive science cognitive engineering and human factors contributors kevin a gluck jerry t ball michael a krusmark richard w pew chris r sims vladislav d veksler john r anderson ron sun nicholas l cassimatis randy j brou andrew d egerton stephanie m doane christopher w myers hansjörg neth jeremy m wolfe marc pomplun ronald a rensink hansjörg neth chris r sims peter m todd lael j schooler wai tat fu michael c mozer sachiko kinoshita michael shettel alex kirlik vladislav d veksler michael j schoelles jerome r bussemeyer eric dimperio ryan k jessup jonathan gratch stacy marsella glenn gunzelmann kevin a gluck scott price hans p a van dongen david f dinges frank e ritter andrew l reifers laura cousino klein michael j schoelles eva hudlicka hansjörg neth christopher w myers dana ballard nathan sprague laurence t maloney julia trommershäuser michael s landy a hornof michael j schoelles david kieras dario d salvucci niels taatgen erik m altmann richard a carlson andrew howes richard l lewis alonso vera richard p cooper and michael d byrne

this book discusses resilience in terms of structures and infrastructures responses to extreme loading conditions these include static and dynamic loads such as those generated by blasts terrorist attacks seismic events impact loadings progressive collapse floods and wind in the last decade the concept of resilience and resilient based structures has increasingly gained in interest among engineers and scientists resilience describes a given structure s ability to withstand sudden shocks in other words it can be measured by the magnitude of shock that a system can tolerate this book offers a valuable resource for the development of new engineering practices codes and regulations public policy and investigation reports on resilience and provides broad and integrated coverage of the effects of dynamic loadings and of the modeling techniques used to compute the structural response to these loadings

computer processing of remotely sensed images a thorough introduction to computer processing of remotely sensed images processing methods and applications remote sensing is a crucial form of measurement that allows for the gauging of an object or space without direct physical contact allowing for the assessment and recording of a target under conditions which would normally render access difficult or impossible this is done through the analysis and interpretation of electromagnetic radiation emr that is reflected or emitted by an object surveyed and recorded by an observer or instrument that is not in contact with the target this methodology is particularly of importance in earth observation by remote sensing wherein airborne or satellite borne instruments of emr provide data on the planet s land seas ice and atmosphere this permits scientists to establish relationships between the measurements and the nature and distribution of phenomena on the earth s surface or within the atmosphere still relying on a visual and conceptual approach to the material the fifth edition of this successful textbook provides students with methods of computer processing of remotely sensed data and introduces them to environmental applications which make use of remotely sensed images the new edition s content has been rearranged to be more clearly focused on image processing methods and applications in remote sensing with new examples including material on the copernicus missions microsattelites and recently launched sar satellites as well as time series analysis methods the fifth edition of computer processing of remotely sensed images also contains a cohesive presentation of the fundamental components of earth observation remote sensing that is easy to understand and highly digestible largely non technical language providing insights into more advanced topics that may be too difficult for a non mathematician to understand illustrations and example boxes throughout the book to illustrate concepts as well as revised examples that reflect the latest information references and links to the most up to date online and open access sources used by students computer processing of remotely sensed images is a highly insightful textbook for advanced undergraduates and postgraduate students taking courses in remote sensing and gis in geography geology and earth environmental science departments
