Mathematical Models for Phase Change Problems J.F. Rodriques,2013-03-07 This monograph collects research and expository articles reflecting the interaction and the cooperation of different groups in several European institutions concerning current research on mathematical models for the behaviour of materials with phase change. These papers were presented and discussed in a Workshop held at Obidos, Portugal, during the first three days of October, 1988, and grew out of a two year period of intensive exploitation of different abilities and mathematical experiences of the six participating groups, namely, in the University of Augsburg, which was the coordination center of this project, the Laboratoire Central des Ponts et Chaussees of Paris, the Aristoteles University of Thessaloniki, the University of Florence, the University of Lisbon and the University of Oxford. This project was carried out under the title Mathematical Models of Phase Transitions and Numerical Simulation, in the framework of twinning program for stimulation of cooperation and scientific interchange, sponsored by the European Community. The underlying idea of the project was to create and study the mathematical models arising in applied engineering problems with free boundaries in a broad sense, namely in melting and freezing problems, diffusion-reaction processes, solid-solid phase transition, hysteresis phenomena, mushy region descriptions, contact problems with friction and/or adhesion, elastoplastic deformations, etc. vi This large spectrum of applied problems have in common the main feature of brusque transitions of their qualitative behaviour that correspond, in general, to non-classical discontinuous monotone or non monotone strong nonlinearities in the mathematical equations

Enriching Your Math Curriculum Lainie Schuster,2010 Presents practices and routines designed to support and nourish teachers as they prepare and present a meaningful year of mathematics instruction for fifth-grade mathematicians. Offers activities, lessons, and narration that can be easily adapted or adjusted to fit the particular needs of the students or the requirements of a prescribed curriculum--

Dead Man Talking... and talking... and talking Philip Sorgen,2014-08-20 PHILIP SORGEN is not really dead--it's just that since he received his poetic license he has been dying to use it. Philip has been an actuarial trainee at Metropolitan Life Insurance Company, a Sp4 in The U.S. Army reserve and then for thirtyfour rewarding years, a mathematics teacher at Great Neck North High School . He plays the piano by ear,composes music (with a pencil) and has tennis elbow, which is a lot less severe than tennis balls. He is the husband of one, a father of two and a grandfather of three. This is the story of his life.
